

ADD USERS MODULE:

1. Add a users link on the main navigation sidebar;
2. Create a new page called users.php;
 - make the users page to look like the customers page (index.php);
 - your users html table should have these columns:
 - first name,
 - middle name,
 - last name,
 - email address,
 - phone
 - Created At
3. Create a mysql table called users in your cms_app database. The table should have below fields/columns
 - id: integer, primary, auto increment
 - first_name: varchar - 60;
 - middle_name: varchar - 60;
 - last_name: varchar - 60;
 - password: varchar - 100
 - email_address: varchar - 60
 - phone: char - 10,
 - created_at: timestamp;
4. Assignment:
 - Implement a full CRUD functionalities of the Users Module. That is implement a create user, edit, view and delete user functionalities. Just as the customers module.
 - NOTE: In the create user functionality, the password should be inserted too by providing a default password in your php script.
5. Bonus:
 1. Try to implement some simple validations, by
 1. checking that email address is unique for a user
 2. phone number is unique
 2. Try to design a login form/page

```
$password = md5('password');
```
